

## **The Utter “Simplicity?” of the TABULATE Procedure-The Final Chapter?**

Dan Bruns, *Tennessee Valley Authority*

Well, here we are again TABULATE fans. Having done basically the same Advanced Tutorial several times, I thought it was about time to do one that is really advanced and bring some closure to this subject. The problem is the more advanced features are anything but simple. In this tutorial we look at some simpler advanced features, like column and row titling, and formatting, and then the one that is really a bear to understand – percentages (PCTN and PCTSUM). We will also take a gander at some of the new Version 8 features.

*Dan Bruns is a Senior Systems Programmer for the Tennessee Valley Authority (TVA) in Chattanooga, TN, and responsible for the installation, customization, and support of several products on the IBM OS/390 mainframes since 1986. He is the SAS Software Site Rep for all platforms at TVA (OS/390, Windows, Sun, and HP), and has been responsible for the installation and support of the SAS System since 1981. He has been a SAS user since 1972. He has presented several papers/workshops at SAS Users Group International (SUGI), SouthEast SAS Users Group (SESUG), and other non-SAS conferences since 1990. His main areas of interest are Base SAS, SAS Macros, and SAS reporting procedures, SAS/GRAPH, SAS/FSP, SAS/ACCESS, SAS/CONNECT, SAS/SHARE, and remote connectivity/communication between platforms. He has been a member of the SESUG Executive Council (EC) since 1994, and was the cochair with Andrew T. Kuligowski for the SESUG 97 conference in Jacksonville, FL. He is currently the SESUG EC Vice President and has also been a member of the SESUG Conference Site Selection Committee since 1995.*
